

ABSTRACT

The preferred embodiment comprises a rack with frames that facilitates easy installation of rack mount servers. Each frame consolidates the individual power receptacles into a single line cord by offering individual power control over each installed server. Each frame further
5 consolidates the individual K/V/M connections into a concentrator switch embedded in the frame itself. This presents the user with a single K/V/M connection that is switchable between the installed servers via a user interface. Also included is a USB hub connecting all servers to a common USB interface. Alternatively, network, serial, and parallel ports can also be included.
